Heat Inductor Gun

The heat inductor uses induction technology to create flameless heat. This accurately concentrates the heat into the area you are working on, only heating the metal or treated plastics.
The key benefit of this is that it minimises the risk of collateral damage and reduces 'cool off' periods saving the workshop time and money. It is an invaluable tool for working with easily damaged components such as body trim and windscreen surrounds. The magnetic field passes through non-metals such as glass and trim and heats the metal underneath. Ideal for track rod ends, exhausts and for any seized nuts and bolts. Supplied with one of each 22mm coil, 19mm coil, universal rope coil.

Features
- 240v 13amp mains powered hand held heat inductor
- Uses induction technology to generate heat quickly in ferrous (iron) components
- No flame or flammable liquids or gases used
- Heat quickly to small or medium size area (coil dependent)
- Supplied with a selection of coil sizes and shapes
- Is faster, smaller and more precise than an oxy-acetylene torch system
- Can heat a 3/4" nut in less than 15 seconds
- Reduces 'cool down' periods giving a valuable time saving for busy workshops
- Potentially gives cheaper liability insurance due to less risk than use of open flames
- Is cheaper to run than gas torch systems
- Has different coil types to help it reach virtually any difficult to reach area
- Has no need for specialist training
- Has an ergonomically designed 'pistol grip' handle for ease of use
- Has a bright LED lamp to illuminate the work area

The heat inductor gun can be used to:
- The removal of seized and corroded components
- Nuts and bolts
- Track rod ends
- Exhaust clamps
- Manifold nuts/bolts
- Bearing housings
- Steering and suspension
- Bearings, gears and pulleys and many more

Repairs
- Freeing off wheel nuts without the risk of extensive wheel damage (where acces permits)
- Hail dent removal
- Body trims
- Windscreen surrounds
- Generally anything that would traditionally require use of a blowtorch or similar flame producing tool

Sonic Booster
START ENGINE USE SONIC BOOSTER

The Sonic booster range offers professional and reliable solutions for all users. In terms of power, our range starts where other competitors end theirs. Our least powerful batteries deliver more power than most average batteries of competing products. Don't be misled by booster and battery ratings! When it comes to jump starting vehicles, what really matters is the power in Cranking Amps (CA), not in Peak Amps (PA). In addition to powerful AGM batteries, our boosters are all equipped with high-quality components which are also very important: double-insulated starting cables, fully insulated clamps with curved and bronze jaws, resistant Anderson connectors, etc. The Sonic boosters are professional tools designed for professional and intensive use.

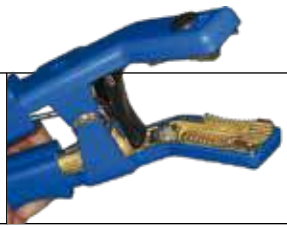

CABLES: Sonic starting cables are double insulated, extra-long, extremely flexible and of very high conductibility. Cables of other boosters are tiny and that's why they make knots inside and break.

CASE: The single-piece moulded case in polyethylene of 5mm, unbreakable and with a lifetime warranty assures excellent resistance to shocks and intensive uses. Cases of other boosters are slim and made out of 2 parts. So it's fragile and more difficult to handle when you have to repair.

VOLTMETER: The Sonic booster uses a traditional voltmeter with a needle where other competing products use LED lights to show the charging level. The voltmeter indicates the precise charging level and can be used to test the proper functioning of the alternator of the vehicle. The battery of a booster must reach 13V when it's recharged and when it's connected to the car-battery. The engine must reach 14,4V because that's the power your car alternator must produce.

CLAMPS: The massive clamps of the Sonic booster are fully insulated and ergonomic with big opening and a braided copper strap in order to spread current through both jaws.
Clamps from other boosters are less user-friendly and don't deliver full current through both jaws. They are also less robust.

FUSES: The internal fuse protects the batteries against short-circuits and overcharge (overuse).

BUZZER: A buzzer that produces a tone will inform you of an inversion of polarity. in option for the 12V Sonic models.

- *Read manual first*
- *Charge the Sonic booster completely before use*
- *To ensure long life and optimize the use of the Sonic booster battery, you must put the Sonic booster on continuous charge after each use using the automatic provided charger*
- *When not using the Sonic booster for long period of time, recharge the unit (using the orignal automatic electric 230V AC charger) every 3 months for at least 48hrs*
- *When using the Sonic booster to start an engine, do not cranck for more than 8-10 seconds, and wait for a futher 3 minutes before a second attempt*
- *Never completely discharge the Sonic booster battery*
- *Never recharge the Sonic booster using a 24V recharging (cigarette lighter) plug on board of a vehicle*

For whom performance really counts

Sonic Booster
START ENGINE USE SONIC BOOSTER

POWER: outcome from the aero space technology, the batteries in the Sonic Booster (AGM/MF, pure lead, made in USA) have an extraordinary energy storage and delivery at very high currents.

ELECTRONIC PROTECTION: the Sonic booster is no danger for the electronic equipment of the vehicles. These jump starters have done millions of startings without any damage (Certificate of AXA insurance policy - NO file has been opened in more than 20 years).

LIABILITY: all the components of the Sonic booster have been selected worldwide for their very high quality for an intensive use dedicated for professionals:

The moulded single-piece polyethylene body of 5 mm, unbreakable (life time warranty), assures excellent resistance to the shocks and everyday uses. Does not take much space in a recovery service vehicle and its ergonomic shape facilitates its use and storage.

The Radaflex® starting cables (double isolation) extra-long, are extremely flexible and of very high conductibility. They allow the user to leave the booster on the ground while starting the vehicle. The electronic automatic charger with continuous current, manages and maintains the battery in perfect condition in order to give full power at start. The recharging cord through cigarette-lighter (DC/DC) allows a quick recharge on board of a 12V vehicle.

Warranty
All users benefit from a one-year warranty on components and workmanship.

Propulstation®

The Propulstation® is a real revolution in the world of jump starters. Developed for all professionals, it makes the emergency start of all vehicles even easier and more efficient! The unique docking station of the Propulstation® allows an automatic and optimal recharge of the booster in recovery vehicles but also in garages and workshops.

THE BATTERY: This is the heart of the device. Therefore, Sonic batteries have been designed with the main focus on delivering a maximum power at start. The battery has exceptionally high capacity to accumulate and disperse high-amperage energy. It uses pure lead plates and is an AGM (absorbed glass mat) type battery, outcome of aerospace technology and offers far superior performance and durability. Waterproof and dry, it can be stored in any position in perfect safety.

THE HOUSING: robust shell case design 5 mm shatterproof polyethylene ensures a high level of shock and daily use resistance. With a lifetime guarantee and modern esthetics that will always remain stylish and discrete thanks to its sober color.

THE CABLES: long and flexible with a double insulation, they have a cross-section capable of delivering the batteries full power. They offer a perfect resistance to extreme conditions. (-30 °c to 60 °C)

THE CLAMPS: the Propulstation® has robust, wide-opening clamps which are fully insulated and have a copper trace carrying the current to both of the bronze jaws and protecting the powerful spring against over-heating.

VOLTAGE DETECTION SYSTEM AND CORRECT CONNECTION SIGNAL: a LED system indicates the voltage to select on the booster. It reduces the risk of misuse while using a 12/24V booster. In the case of misuse any build up of gas will be evacuated. The LEDs also indicate if the booster is correctly connected to the station. If it is the case, the LED corres- ponding to the voltage of the charging circuit is lit on.

THE FUSE: the fuse is directly accessible from the outside of the booster. A spare fuse is available on the side of housing. A blue LED indicates the correct functioning of the fuse. If it does not light up when pushing on the red button, the fuse is blown.

UNIQUE ON THE MARKET CLAMPS: the massive clamps of the Sonic booster are fully insulated and ergonomic with big opening and a braided copper strap in order to spread current through both jaws. Clamps from other boosters are less user-friendly and don't deliver full current trough both jaws. They are also less robust.

THE CONTACTOR: it revolutionizes and makes the storing of the booster in its station easier. Thanks to the powerful magnets, the booster is guided at its place avoiding any risk of bad connection. The contactor ensures an optimal recharge of the booster and avoids any movement while stored in the vehicle.

Propulstation®, when it's stored, it's charged!

5 ASSETS

ALWAYS IN THE RIGHT PLACE
In the workshop, the booster has its place and any user knows where to find and store it. In the vehicle, it is perfectly set in the station.

ALWAYS CHARGED AT 100%
Stored in its station, the booster is automatically and optimally charged between two starts.

100% SUCCESSFUL STARTS
Always at its maximal capacities, the booster ensures 100% successful starts.

A 3 TIMES LONGER LIFETIME
The optimal charge of the Propulstation® avoids the irreversible battery sulfation which is caused by the battery voltage dropping below 12,4V and will lead to premature failure of its battery.

ABSOLUTE PLEASURE OF USE
The user will benefit from the unlimited pleasure of working with a reliable and efficient tool.

DOCKING STATION IN 2 VERSIONS

VEHICLE: the vehicle station must be connected to the recovery vehicle's battery by the DC/DC 12V/12V (or 24V/24V) lead. This has a one-way diode that prevents the breakdown vehicle from discharging the booster. The lighting and other equipment on the breakdown vehicle are heavy current consumers

WORKSHOP: the workshop station has a 230V/12V AC/DC charger to connect to the mains. Due to the weight of the portable booster 12/24 and 24V it is advised to mount the station on the floor.

PROPULSTATION® MOBILE THE POWER THAT ROLLS!

LARGE WHEELS: provide easy mobility on the most difficult terrain.

A THIRD WHEEL MULTIDIRECTIONAL: equipped with a brake ensures manoeuvrability and immobilization of the booster on an inclined surface.

ERGONOMIC HANDLES: designed to facilitate the movement of the booster in inclined and vertical positions, by pulling or pushing it.

Propulstation®

THE PROPULSTATION HAS TWO ELEMENTS:
1) powerful start booster for professional use
2) charging station

The fixed docking station will automatically charge the Propulstation® which results in an optimized power supply.

Accu-smart®

Battery charger - multi stage charging

Did you know that your batteries suffer from self-discharge? Lead batteries get discharged even without being used!
The loss of capacity can reach up to 6% per month (at 20°C) and even more by higher temperature. Yet below 12,4V, lead batteries start to sulphate. The more one battery is discharged and the longer it stays discharged, the more sulphate covers the lead plates inside. This sulphate will corrode the lead and damage the battery irreversibly. Moreover, contrary to other types of batteries, lead batteries do not suffer from memory effect and must be charged as often as possible. Ideally, the recharge must be permanent and done with an electronic automatic charger. Accu-Smart® is therefore the essential tool for professionals and private users having vehicles stopped. These are a few examples:

- Old timer cars and motorbikes
- Agricultural and garden vehicles
- Leisure vehicles, motor homes
- Boats
- Vehicles in showrooms in stock or on parking lots
- Rental vehicles
- Mountain vehicles

829095 - HIGH PRESSURE FUEL PUMP PULLER DIESEL FORD - TDCI - TRANSIT 2.2

FORD

DIESEL CHAIN

As of 2011 Ford changed the method of fuel pump sprocket removal on the 2.2 TDCI (Puma) diesel engines. The sprocket no longer has threaded holes which means the legs of the puller used to remove the sprocket must be hooked in shape. The K00286 puller allows the removal of these sprockets by allowing the high pressure diesel injection pump to be pushed out of the pump sprocket to enable pump removal without disturbing the timing chain. Special note: To perform this task the 829095 must be used with Ford special tool 303-1151 (sprocket holding tool).

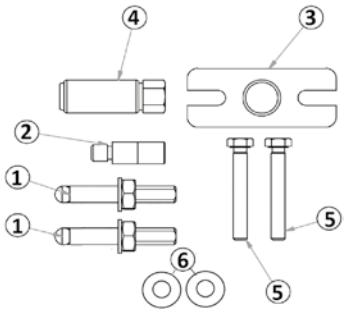

Note: The 829095 kit contains a force screw. Force screws must be lubricated with high pressure grease. Sonic recommends the use of molybdenum disulphide grease (drive shaft grease).

829124 - TIMING CHAIN FITTING BRIDGE - MERCEDEZ BENZ

MERCEDES

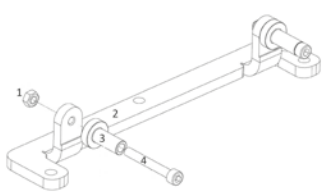

DIESEL CHAIN

The Mercedes-Benz M651 1.8 | 2.1 diesel engines can suffer from issues requiring the replacement of the timing chain. The M651 timing chain is at the back of the engine (flywheel end) which makes the replacement of the timing chain difficult. To avoid the need for completely stripping the engine the new chain must be attached to the old chain and "threaded" around the engine sprockets while turning the crankshaft. The 829124 Timing Chain Fitting Bridge helps guide the new chain into position while the old chain is extracted by maintaining the contact of the new chain with the sprocket.
Note: the 829124 must be used with the cam locking tools found in 829120 M651 engine timing kits.

829122 - VIBRATION DAMPER HOLDING TOOL - 1,8/2,0 TFSI/TSI

VAG - AUDI - VOLKSWAGEN

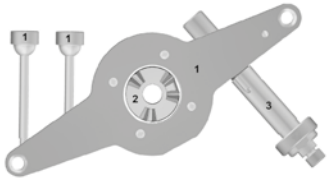

PETROL CHAIN

A comprehensive kit used for dismantling and assembling the vibration damper on the applications listed. The vibration damper fitted to the VAG 1.8 | 2.0 TFSi | TSi engines is held in place by a single central bolt. The pulley clamps the crankshaft timing chain sprocket against the end of the crankshaft, there is no traditional key way and the sprocket is not supported by the crankshaft. If the pulley bolt is removed without using the 829122 the crankshaft chain sprocket can easily separate from the crankshaft causing the timing position to be lost. The 829122 is an essential kit required to maintain the engine timing when removing the front vibration damper and should be used whenever the vibration damper is removed for instance when replacing the front crankshaft oil seal. N.B. for replacement of the camshaft drive chain additional tooling will be required – see Sonic Equipment 829066 Engine Timing Kit.
The 829122 can also be used on earlier engines as the VW tool T10531 replaces the older tool T10368.

Warranty conditions

Definitions

The following definitions apply in the warranty conditions:
End User: the natural or legal person who has purchased a Product from a Sonic Retailer for personal use, without the intention to sell the Product to third parties or install it at the premises of others.
Products: all goods, usage rights and other proprietary rights of (the label) Sonic which are sold via authorised Sonic Retailers and destined for End Users.
Sonic: Sonic Equipment BV, a private company with limited liability, registered in Purmerend, the Netherlands, and with its place of business at Component 114, 1446 WP Purmerend, the Netherlands (Chamber of Commerce No. 37113345) and its affiliates.
Sonic Retailer: any sales outlet of a natural or legal person exercising a profession or business, and which is authorised by Sonic to sell Products to End Users as a reseller of Sonic Equipment BV.
Sonic Warranty: the warranty in these Warranty Conditions for End Users of Products.
Warranty Conditions: these warranty conditions of Sonic Equipment BV which apply to Products of Sonic that are sold to End Users through authorised Sonic Retailers.

Definitions can be used in both singular and plural, without loss of substantive meaning.

General

Sonic only supplies Products through Sonic Retailers.
Products are manufactured for intensive and professional use. All Products are manufactured and put together with the utmost care, and they undergo the most stringent quality and production controls. Nevertheless, problems with material and/or workmanship may arise. The Sonic Warranty only warrants defects in workmanship or materials that prevent their use and to the extent set out in these Warranty Conditions. The Sonic Warranty does not include any right to indemnification or compensation in any form whatsoever. Sonic is and shall not liable for any incidental, special or consequential losses, costs or damages.

The Warranty Conditions do not affect mandatory legal warranty obligations in any way.

Warranty:

The length of the warranty is always dependent on the Product concerned, and is specified in the catalogue and/or on the Sonic website. The warranty commences when the End User purchases the Product. The Sonic Warranty is only valid upon presentation of proof of purchase of the Product with clear date of purchase, and subject to registration of the Product to the extent required.
The Sonic Warranty for storage systems is only valid if the storage system is properly registered on the Sonic website. The Sonic Warranty is not transferable and only valid for the End User who directly purchases a Product from a Sonic Retailer. It is not valid for subsequent users. The End User must report to the Sonic Retailer when making a claim under the Sonic Warranty.

If Sonic considers that a Product is covered by the Sonic Warranty, it will repair or replace the Product at its sole discretion, taken into account the duration of the use of the Product. Replaced Products become the property of Sonic. If a Product is no longer in Sonic's range, Sonic may at its sole discretion supply a similar Product or provide a refund by means of a voucher.

Any work performed under warranty must be carried out by Sonic. The shipping costs for assessing the Sonic Warranty must be borne by the sender. The Sonic Warranty covers parts, labour and return to sender. Replaced and repaired Products are also covered by the Sonic Warranty. The length of the Sonic Warranty is not extended or renewed if parts are replaced, repaired or supplied.

Sonic regularly changes and improves various Products according to market demands and/or improvements in technology. Products listed in the catalogue are subject to changes of both a technical and visual nature, without further notice. Sonic reserves the right to make changes in design, construction or technology at any time without incurring any obligation in incorporating such changes in Products of Sonic previously sold or sent for repair.

Length of the Warranty

Sonic offers four warranty options in addition to the legal warranty. Unless specified otherwise, the Sonic Warranty is for a period of 10 years.

SG3: This warranty is for a period of 3 years.
SG2: This warranty is for a period of 2 years.
SG1: This warranty is for a period of 1 year.
SGX: These items have no warranty.
